Q.14 to Q.17

Passage : The Life of a Honeybee

Honeybees are fascinating creatures known for their role in pollination and honey production. A honeybee colony consists of three types of bees: the queen, the worker bees, and the drones. The queen's primary role is to lay eggs, and she can lay up to 2,000 eggs in a single day. Worker bees, all female, handle tasks like collecting nectar, defending the hive, and feeding the larvae. Drones are male bees whose sole purpose is to mate with the queen. Honeybees communicate using a unique "waggle dance" to inform others about the location of food. Despite their small size, honeybees are vital for maintaining biodiversity.

Q 14. What is the primary role of the queen bee?

- A. To collect nectar
- B. To defend the hive
- C. To lay eggs
- D. To perform the waggle dance

Q 15. How do honeybees communicate about food sources?

Q.18 to Q.21

Passage: The Journey of Plastic

Plastic has become a significant part of modern life, but it also poses severe environmental challenges. Most plastic items are made from non-renewable fossil fuels and take hundreds of years to decompose. Single-use plastics, such as straws and bags, are especially harmful as they often end up in oceans, threatening marine life. Recycling can reduce plastic waste, but less than 10% of the world's plastic is recycled. Scientists are now exploring alternatives like biodegradable plastics and encouraging people to adopt reusable items. Reducing plastic use requires collective effort and awareness.

Q 18. What are most plastic items made from?

Q.17 to Q.20

Passage : The Water Cycle

The water cycle, also known as the hydrological cycle, describes how water moves through Earth's systems. It begins with evaporation, where water from oceans, rivers, and lakes turns into vapor due to the sun's heat. This vapor rises and cools, forming clouds through condensation. When the clouds become heavy, they release water back to the ground as precipitation, such as rain, snow, or hail. Some of this water flows into rivers, while some seeps into the soil, replenishing underground reservoirs. This continuous process ensures that water is cycled and reused in nature.

Q 17. What triggers evaporation in the water cycle?

- | | |
|--------------------------|--------------------------|
| A. Wind | B. The sun's heat |
| C. Clouds forming | D. Rain |
